“The Discovery of Gravitational-waves and the First Observation of a Binary Black Hole system”

Szabolcs Marka, Zsuzsa Marka and Imre Bartos
Columbia University

On September 14th 2015 the gravitational wave signature of a binary black hole merger was detected by the LIGO observatories. This marks the beginning of a completely new era of modern physics, the dawn of gravitational-wave astrophysics. We will discuss the discovery, its impact and its consequences.
